Research Interests

With a solid molecular biology foundation from my undergraduate and graduate studies, I have gained invaluable experience in various research areas, including tropical medicine, medical microbiology, pharmacology, bioengineering, and therapeutic sciences. On top of that, my expertise in anesthesia, cancer, microbiology, immunology, neurobiology, anatomy, and neurosurgery has allowed me to approach research questions from multiple angles, providing a holistic understanding of complex biological systems.

In addition to my work in molecular biology, I am also highly motivated to contribute to the emerging field of Astrostructural Biology. I have been fascinated by the possibility of extraterrestrial life and am eager to apply my skills and knowledge to develop new approaches to studying biomolecules in extraterrestrial environments. As a recent Biology graduate with laboratory experience, I have developed a strong foundation in structural biology techniques. I am excited to expand my knowledge in photon science (photoenzyme catalysis and molecular photochemistry) and astrobiophysical structural analysis.

My long-term goal is to become an expert in these areas and to contribute to our understanding of the origin and evolution of life in the universe. In addition, with over a decade of experience in molecular biology, my expertise in clinical neuroimmunology, structural molecular biology, and computational biophysics will be valuable in advancing the field of Astrostructural Biology. I look forward to continuing my research in these areas to contribute to developing novel therapies for various diseases, including skin cancer and aging, and to further our understanding of the universe and the possibility of extraterrestrial life.
